Dental milling burs

Dental CAD CAM special milling tools

Zirconia milling tool, titanium milling tool, cobalt chromium milling tool, glass ceramic milling tool, resin milling tool, coated milling tool.

These specialized dental radius cutters have a semi-circular tip.
Cutting cutters with a direct range from 0.66 mm to 2 mm are mainly used for preliminary efficient machining;
The 0.6 mm milling cutter is mainly used for sulcus engraving and fine treatment of teeth.
Thanks to the special length of these milling cutters and the completely flexible turning, the undercut problem can be easily solved.

Developed into a global high-quality, cost-effective dental CAD CAM professional milling tool manufacturer

A wide range of equipment can be matched	Sufficient inventory and timely delivery	The quality of various materials can be processed higher than the international similar products	Non-standard custom cycle is short	Unconditional return compensation for any product problem

The necessary tools for turning machine tools to extend the life of your milling tool and increase the number of grinding teeth.

Excellent Performance

- Self-produced, long service life
- Complete series: matching materials such as zirconia, glass ceramics, metal dentures, etc.
- Customized models with special specifications are available

Milling Burs

This dedicated dental milling burs have half roundmucro . Range of milling is from 0 . 6mm to 2 mmwhich is used for preliminary and high efficiencymanufacture . 0 . 6mm milling burs is mainly usedto milling the sculpture of groove , the elaborateprogress . The undercut problem can be fixedeasily due to the special length of milling burs andflexible milling

System：Roland , VHF， Imes icore , Zirkonzahn， Amann，Yenadent

Milling burs are necessary tools for your milling machine
Extend the lifetime of your milling tools and increase the number of milled units
